tharungk202@gmail.com | +91-9164054290 | GitHub | LinkedIn

SUMMARY

Information Science student interested in AI, cloud computing, and cybersecurity. Experienced in building practical projects involving content safety, patient monitoring, and real-time chat applications. Comfortable working with HTML, CSS, JavaScript, Python, FastAPI, Flask, and Firebase, with exposure to AI models, authentication, API integration, and cloud databases.

TECHNICAL SKILLS

Languages: HTML, CSS, Java, Python, Bash

Frameworks & Libraries: FastAPI, Flask, Firebase, NumPy, Pandas, Machine Learning Libraries

Tools: GitHub, Visual Studio Code, Google Colab

Technologies: Cloud Database, Authentication, API Integration, AI Model Usage, Project Documentation

PROJECTS

Suraksha-Astra – AI-Based Content Safety System

Python, FastAPI, HTML, CSS, JavaScript, Pre-trained AI Models

- Built a content moderation system to check text and images before allowing uploads.
- Used pre-trained AI models to detect unsafe text and inappropriate image content.
- Implemented risk scoring based on content risk, behaviour risk, and account risk.
- Added decision logic to classify content as allowed, limited, or blocked with clear moderation reasons.

GKS-CARE – AI-Based Patient Deterioration Monitoring System

GitHub

Python, Flask, Pandas, HTML, CSS, JavaScript

- Developed a simulated real-time patient monitoring system to track vital signs and identify potential deterioration.
- Implemented risk assessment logic to classify patient conditions as Low, Medium, or High risk.
- Processed patient data including heart rate and oxygen levels using Python and Pandas.
- Built a live monitoring dashboard using Flask, HTML, CSS, and JavaScript with automatic data updates and risk alerts.

Cloud Chat Application

GitHub

HTML, CSS, JavaScript, Firebase Authentication, Firestore

- Built a real-time chat application using Firebase as the backend service.
- Implemented user registration and login using Firebase Authentication.
- Used Firebase Firestore to store and synchronize chat messages in real time.
- Enabled real-time message updates without page refreshes and deployed the application using GitHub Pages.

EXPERIENCE

AI/Machine Learning Intern – StaxTech

July 2025 | Certificate

- Completed a 1-month internship focused on Artificial Intelligence and Machine Learning.
- Worked with AI/ML workflows, datasets, and model-related tasks.
- Assisted in developing AI-based solutions and gained practical exposure to industry workflows.

Cyber Job Simulation – Deloitte

July 2026 | Certificate

- Completed a practical cybersecurity job simulation focused on investigating simulated security incidents.
- Analysed web request logs to identify suspicious user behaviour and potential security threats.
- Applied cybersecurity concepts to assess network access and authentication activity.

RESEARCH & ACHIEVEMENTS

- Research Paper Presenter** – ICAIB-2026 International Conference
- Presented “Suraksha-Astra: AI-Based Multimodal Cyber Safety and Content Moderation System.”
- 2nd Prize** – AI Innovation Challenge, World Innovation Day 2026

EDUCATION

Presidency University

2023–2027

Bachelor of Technology in Information Science and Technology

CGPA: 7.48/10

INITIATIVES

- Leading development of BookMyShift and HackEra as part of a startups project in the development phase.
- Active participant in AI/AIML, research, and innovation activities.
